

## WD-Assign10 – Product Website

Create a **Web Site** that will be used to sell a product a product of your choice (school appropriate of course). Follow the steps listed below:

- Create a folder and name it "firstnamelastname-WDAssign10"
- Place a copy of your template file in the folder and rename it "index.html"
- Design your home page using headings, paragraphs, divs, horizontal rules, images, and most importantly CSS.
- Create a link menu that will link your future pages together. (\_self)
- Place an external link somewhere on the page (\_blank)
- Once the page is finished validate it and save.
- Now copy the page twice and rename them to reflect your imaginary links
- Go into each page with TextEdit to change the page content
- Make sure all three pages validate and work (links are functioning)

It is important that you spend time getting your homepage just right. If you have errors before you copy the other pages, you will have to fix the errors multiple times instead of just once.

Once finished, hand in the **entire folder** "firstnamelastname-WDAssign10".

A sample is available on the next page.

### WD-Assign10: Product Website Rubric

Heading, paragraphs, and divs are used properly	/5
Horizontal rules and images are used to decorate and section the page	/5
CSS is used in <body> <p> <div> and headings to decorate the page as in a layered fashion	/10
A link menu is created that links all pages together. (_self)	/10
External links are used that launch in a separate window. (_blank)	/5
All pages are stored properly in a folder called "product website"	/2
Web page validates and code is well written	/3
-----	
Total	/40
