

## WD-Assign12 – Using Tables For Page Layout

Start a new page from your template. In this file, create **2 unique tables** that could be used for a webpage layout. You will need to use paragraphs with non-breaking spaces (&nbsp;) to help the table take form.

Your table must require row or column spanning for layout and can not simply be a duplicate of the two designs I created in this lesson. You should use css to decorate the table and the background of the page. You do not need to fill the table with content.

Your code must validate! So check it often as you work!

Save this file as "**firstnamelastname-WDAssign12.html**" and **place a copy in my dropoff folder**.

There are some samples provided on the following pages.

## WD-Assign12 Rubric– Using Tables For Page Layout

Table Layout Designs are complex /10

CSS is used to assist in color and page design /3

Non-breaking spaces are used to make table take shape /2

Code is well written and indented, and page validates /5

**Table Layout #1**

The diagram shows a rectangular layout with a dark blue header bar at the top containing the text "Table Layout #1". On the left side, there is a vertical light blue sidebar. The main content area is white and is bounded by a dark red top border and a pink bottom border. The entire layout is enclosed in a dark blue border.

The diagram shows a rectangular layout with a bright green header bar at the top. On the left side, there is a vertical white sidebar. The main content area is a grid of colored cells: a 4x3 grid of smaller colored squares (brown, yellow, blue, purple, etc.) and a large dark teal vertical bar on the right side. The entire layout is enclosed in a dark grey border.
