

## WD-Assign14 – CSS Element Boxes

Create a page sample that describes your favourite restaurant.

1) Define the following CSS Rules in the head section:

Body                      h1                      h2                      p

2) You will also have to create CSS classes in the head section to decorate the following items:

- a div container that contains all elements on the page
- a second div container that goes inside the first div container and contains only some elements on the page

Save this file as ***firstnamelastname-WDAssign14.html*** and hand it in to my drop folder.

There is a diagram of the structure you should use on the next page.

## WD-Assign14 Rubric– CSS Element Boxes

Content information is well written and on topic. /5

Final product closely resembles the layout and design of the example provided. /5

CSS Rules are used properly to control and decorate body, h1, h2 and p. /5
